Professional Summary

Full Stack Developer with almost 4 years of experience at CARE Pvt. Ltd. Spent most of that time on PTCL IMS, a Lawful Interception monitoring platform for LEAs that was redesigned from the ground up while on the team. Built the frontend with React.js and TypeScript, the backend as Spring Boot microservices integrated with Kafka and Keycloak, and the database with MongoDB sharded and replicated across two regions. Involved from early development through deployment on offline, air-gapped servers, and continued supporting it in production (fixing issues, training end users, and coordinating acceptance testing with telecom teams) while also maintaining several other legacy Lawful Interception systems as team members moved on. Seeking a role with more room to keep growing technically.

Core Competencies

Frontend: React.js, Next.js, TypeScript, JavaScript, Tailwind CSS, Material UI, Redux Toolkit

Backend: Java, Spring Boot, RESTful APIs, Microservices Architecture

Messaging & Auth: Apache Kafka, Keycloak

Databases: MongoDB (Sharding & Replication), MySQL

DevOps & Tools: Docker, Nginx, Git, offline/air-gapped deployment

Other: C# (.NET console applications - working knowledge), Provisional Acceptance Testing (PAT), Cross-team Coordination, Data Center Operations

Professional Experience

Center for Advanced Research in Engineering (CARE Pvt. Ltd.) – Islamabad, Pakistan

Senior Design Engineer (Full Stack Developer) | 09/2024 – Present

Design Engineer (Full Stack Developer) | 09/2022 – 09/2024

- Owned end-to-end frontend development for PTCL IMS, a Lawful Interception monitoring platform redesigned from the ground up for LEAs, built with React.js, TypeScript, Redux Toolkit, and Material UI.
- Designed and built RESTful microservices in Spring Boot, integrating Apache Kafka for asynchronous inter-service event streaming and Keycloak for centralized authentication and authorization.
- Maintained a MongoDB database sharded and replicated across two regions. Diagnosed and fixed replication and sharding issues that came up during field support.

SAAD RASHID

Full Stack Developer - React & Spring Boot

- Integrated the React frontend with 8+ Java/Spring Boot microservices and legacy .NET/C# console applications to support real-time telecom data monitoring workflows.
- Owned the full deployment lifecycle: built and packaged JAR artifacts and frontend builds, containerized services with Docker, configured Nginx, and deployed to offline/air-gapped production servers.
- Performed manual testing across the full stack alongside teammates prior to each production rollout.
- Delivered post-deployment field support: on-site troubleshooting, end-user training, and feature enhancements driven directly by client feedback.
- Took over maintenance of other legacy Lawful Interception systems (SCO Mobile, PTCL NGN & Nayatel, Cybernet) as senior team members left, and became the main point of contact for the end user on these systems.
- Conducted Provisional Acceptance Testing (PAT) for PTCL IMS and legacy Lawful Interceptions (SCO IMS & Mobile, Cybernet, Nayatel), coordinating with telecom teams to test call scenarios (normal calls, call forwarding, conferencing) and verify interception results across each system's GUI.
- Documented PAT results (call type, caller/callee, timestamps, status) with exported audio files and delivered reports to the LEA, supporting provisional acceptance sign-off and warranty period activation for telecom operators.
- Performed on-site data center support, including server and cable connectivity checks, disk space monitoring, and troubleshooting media playback and streaming issues.
- Wrote automation scripts to manage log rotation and disk space on production servers, reducing recurring manual maintenance.

Education

Bachelor of Science in Software Engineering

COMSATS University Islamabad | 09/2018 - 06/2022

Key Projects

Falcon Target - Bullet Localization System | Python (Reflex), Recharts, SQLite

- Built a web application visualizing bullet impact coordinates on a target board using interactive charts, with session-based tracking and performance analytics dashboards.

IJournalist - AI News Sentiment Analysis Platform | React.js, AI/LLM Integration

- Built the frontend for a platform analyzing sentiment across multi-source news articles, including dashboards, trend reports, and keyword-based filtering.
